

Methodology

Security Management is the first and perhaps most important Office for Civil Rights (OCR) category in their published audit protocols. Building an effective information security program starts with an effective governance process. Our Security Management-as-a-Service involves our ongoing assistance, participating as a member of the Information Privacy and Security Steering Committee. An information security implementation plan/roadmap is developed and maintained to drive continuous improvement in the client's information security program.

The Results

Priorities are adjudicated through the steering committee and senior management engagement. Risks are continuously assessed and implementation plans are managed using staffing resource availability and budget capacity as key inputs.

Progress with the client's overall information security posture is accelerated and measurable. The implementation plan/roadmap is retained in the event of an OCR or CMS audit.

CSB IT Security Experience

Why CSB IT Security?

Healthcare CIO executive experience

Certified technical experts

Risk Assessments that have passed CMS and OCR audits

Security experience with diverse healthcare organizations – hospitals, large physicians groups, HIEs, managed care organizations, IPAs and business associates

Modular approach designed to meet the practical needs of healthcare organizations

Practical solutions to combat the increasing threat of Hackers
